

## Summary

---

Last week we have learned:

- Basic knowledge of the world wide web
- Tools used to Plan, Design, Implement & Manage
- The wireframe is new to me. I think I will use it to have a better plan for the website.
- The stage from the user (Client-end) to the server - the Internet content provider (Back-end)
- different components of the web, and explanation of each of them.

## Question for Mid-term

---

MCQ: Which of it are not a Webserver:

- A. Apache
- B. Nginx
- C. HTML**
- D. IIS

## Surprise or confused topic

---

The graph 'Full Stack Web Development' actually surprise me, it let me have a better understanding of how a website work. When I implement my website, myself using some kind of packet, I would not realize parts like server-side code that powers the whole site while as user we will not know how essential it is.
