

Week 2 Summary

Summary

This week, we had learned more on the HTML, covering the basic knowledge, introduced some of the tags we will use frequently, and learned how to write and format the document. Here is the list of things we had studied this week:

- Cornerstone technology for the WWW – HTML + CSS + JS
- What is HTML – markup language for creating web pages.
- HTML tags
 - o strong, em, abbr
- Using live server extension in vscode.

Question for Mid-term

How to write an unordered list without bullet?

A: Using tag attribution: `style="list-style-type:none;"`

Example:

```
<ul style="list-style-type:none;">  
  <li>item</li>  
</ul>
```

Surprise or confused topic

This week's topic helps me strength my knowledge on HTML 5 tagging. And first time I know underline tag `<u>` was deprecated in one version of HTML but it redefined in HTML5. And use of `<abbr>` is new to me, since I rarely discover website will use it, I normally not notice this thing exist.
