<div align="center">Week 10 Summary</div>

Summary

This week, bootstrap 4 was introduced. This technology is really helpful when doing web development. A well-developed software solution will provide a standard way to build a useable and reliable webpage. It can reduce all the hard work and easy to deploy to a live system. Thursday's class demonstrates the bootstrap grips. The container class is easy to use. Bootstrap contains most screen arrangement for the container, that developer will only have to call the class in `col-[type]-[num]` format. It reduced the workload for responsive design.

Surprise or confused topic

- Bootstrap is well known and it is widely used.

- As I am exploring the bootstrap on its official website, it even has themes that are easy to use.

- Setup a container class and deploy responsive `col` can be easy while use bootstrap.
